

IMPORTANT INFORMATION

Overall Assembly Dimensions are normally accurate to within a few millimetres but **MUST BE CHECKED ON SITE** in relation to building structures and obstructions.

Advise ServaClean if larger or smaller components are required to achieve the most accurate fit.

The "BARFRAME" structure has robust upright supports to carry and secure any type of counter top. Permanent, stainless steel handrails are positioned for all fitted locations, and for pre-drilled "Backplates" which connect the upright supports and facilitate screw fitting of the decorative front paneling. Assembly is completed utilizing just one screwdriver and the bolt-together structure provides a good electrical earth bonding.

Integral Service Ducts accommodate below fire flypipes, electrical and plumbing pipework. "Cabletrays" (if included) provide support and fixing holes for power/cable cables and sockets.
